

UAS Project Spotlight: Beyond Visual Line of Sight (BVLOS)

Percheron partnered with TC Energy to execute an exploratory project investigating the process of obtaining a Beyond Visual Line of Sight (BVLOS) waiver from the FAA, and the viability of executing BVLOS UAS flights in a real-world scenario along a pre-selected Right of Way in the Northeast.

Percheron's expert UAS team was able to obtain the BVLOS waiver for the operational area in the Northeast and completed multiple BVLOS flights along the selected project route. In the history of commercial UAS flight, there have only been approximately 100 BVLOS waivers granted by the FAA, with Percheron being a part of that elite list.

Percheron's commitment to innovation and the advancement in project technology keep us at the forefront of our industry to provide the best, integrated solution to our clients.
